## **MICT Cloud: MICT's privately owned data centre**

When it comes to the decision of migrating your on-premise servers to a hosted off-premise solution, factors like security, redundancy, limited space, and peace of mind play a significant role. However, this transition may seem overwhelming and costly. To address these concerns, MICT has made significant investments in its privately owned Tier 2 data centre, offering clients enhanced control and reassurance.

With MICT, you have the flexibility to choose from a range of solutions tailored to your specific needs. Whether it's hosting your physical servers, renting hardware to host your virtual servers, or purchasing server services, we can provide a customized solution that aligns with your requirements.

By having our own data centre, MICT can offer a diverse range of options to accommodate different budgets and address client concerns effectively. Our data centre is fully compatible with Tier 2 standards and features robust air cooling systems and battery backups. Additionally, we have established partnerships with multiple Internet Service Providers (ISPs), ensuring up to 30GB of internet bandwidth to meet your connectivity needs.

Trust MICT's privately owned data centre to provide the reliability, scalability, and security necessary for hosting your physical and virtual servers. Let us help you make a seamless transition to an off-premise solution while enjoying the benefits of our state-of-the-art infrastructure.

## MICT offers a wide range of solutions, including:

The table below compares the four tiers of data centres and the services they offer to clients.

**Note:** The higher the tier level, the greater the reliability and redundancy in the data centre's infrastructure.

Parameters	Tier 1	Tier2 (MICT)	Tier 3	Tier 4
<b>Price</b>	£	££	£££	££££+
<b>Staffing</b>	None	1 shift	2 shifts	24/7/365
<b>Typical Customer</b>	Small companies with simple requirements	SMB's	Growing and large businesses	Government entities and large enterprises
<b>The main reason why companies select this tier</b>	The most affordable data centre tier	A good cost-to-performance ratio	A fine line between high performance and affordability	A fault-tolerant facility for high levels of traffic or processing demands
<b>Uptime guarantee</b>	99.671%	99.741%	99.982%	99.995%
<b>Downtime per year</b>	<28.8 hours	<22 hours	<1.6 hours	<26.3 minutes
<b>Description</b>	Basic infrastructure and limited redundancy	Redundant capacity components	Concurrently maintainable infrastructure	Fault-tolerant infrastructure
<b>Services Provided</b>	Power and cooling systems	Tier 1 services plus redundant power and cooling	Tier 2 services plus multiple power and cooling distribution paths	Tier 3 services plus dual power and cooling systems with no single points of failure
